REFERENCE LETTER

Thomas Solis (16/07/2002) was employed at the Institute for Design Strategies (IDS) from May 1st 2024 until June 30th 2024 as an intern in the IAESTE mobility program. During his internship, he worked on the research project "Façades and Urban Soundscape", dissertation project of the supervisor of this internship: M.Eng. Alvaro Balderrama, researcher and lecturer at TH OWL. The tasks included:

- Data analysis in Python: The main task of the internship was based on the use of Python libraries for data science in order to refine a digital workflow for acoustic engineering. The codes developed will be shared in a public repository.
- Machine learning in Python: Soundscape data is typically comprised by a broad range of sources such as sound itself, but also the environment, and the people experiencing the environment. To analyze complex sets of data, statistical methods and machine learning techniques are at the state-of-the-art globally, therefore during the internship, a preliminary methodology to process these data was developed.
- Research design and critical thinking: The internship had a clear structure and goals, however, it was necessary to explore different possibilities based on design and engineering factors.

During his time in Detmold, Mr. Solis showed professional skills and human quality. His communication in English at the research lab and the university was always appropriate, and he was eager to learn new fields of knowledge beyond his own academic and professional background. Working with him was a pleasant experience, therefore, I highly recommend him for future professional and academic tasks. If I can be of any further help, please do not hesitate to contact me.

Best regards,

M.Eng. Alvaro Balderrama
